Experience

Backend and Distributed Systems Engineer | *100xDevs*
Remote / May 2026 – Present

- Built distributed, event-driven cohort backend services with Node.js, Express, Bun, PostgreSQL, and Prisma ORM, implementing Redis caching layers and high-concurrency WebSocket channels.
- Architected modular monorepos with Turborepo, decoupled message producers and consumers, containerized microservices with Docker, and configured automated CI/CD deployment pipelines.

Full Stack Freelance Projects | *Client Solutions*
Greater Noida, India / Jun 2025 – Oct 2025

- **Inventory Manager:** Engineered an inventory and accounting platform with an ACID double-entry ledger, cutting monthly financial reconciliation from 2 days to 4 hours.
- **ClinicPro:** Built a clinic management system with conflict-free slot booking and sub-millisecond patient search across 1,000+ records, lifting attendance by 20%.
- **Refokus Clone** [GitHub] | [Live Demo]: Built an interactive agency experience with Framer Motion and Locomotive Scroll, rendering fluid 60 FPS scroll-driven interactions.
- **Snake Arcade** [GitHub] | [Live Demo]: Architected a full-stack real-time arcade game with a deterministic 150 ms loop, anti-reversal input buffering, and MongoDB leaderboard.

Projects

CryptEx – High-Performance Crypto Exchange [GitHub] | [Live Demo]
TypeScript, Bun, Redis Streams, PostgreSQL, WebSockets, Docker, Turborepo

- Engineered an event-driven spot and perpetual exchange across six microservices, utilizing red-black tree order books and FIFO queues to sustain 1,000+ orders/sec with sub-50 ms p95 latency.
- Decoupled persistence and WebSocket fan-out via Redis Streams consumer groups, streaming book deltas to 500+ clients under 100 ms and rehydrating R2 snapshots in sub-5 s with zero data loss.

Ludo – Real-Time Multiplayer Gaming Platform [GitHub] | [Live Demo]
TypeScript, Next.js 16, Node.js, WebSockets, Redis, PostgreSQL, Prisma, Docker, Turborepo

- Architected an authoritative, zero-dependency Ludo game engine across a Turborepo monorepo; synchronized deterministic turn progression, safe-zone captures, and 3-consecutive-six penalties, validated with 24 unit tests.
- Engineered a dedicated Node.js WebSocket service delivering sub-50 ms updates via Redis Pub/Sub; automated 4-player FIFO matchmaking via atomic Lua scripts and enforced a 60s disconnect recovery grace period.

CodePuppet – Self-Hosted AI Coding Agent [GitHub] | [Live Demo]
TypeScript, Express, Bun, Prisma, PostgreSQL, Redis, SSE, AWS EC2, Jest, Docker

- Architected a Turborepo monorepo with three applications and six shared packages; isolated 11 tools across five categories in a permission-gated sandbox and validated core workflows with 40+ Jest tests.
- Unified streaming adapters for four LLM providers over SSE in under 100 ms, persisted turns atomically with per-turn token accounting, and secured keys using AES-256-GCM and device-flow login.

Technical Skills

Languages: TypeScript, JavaScript, Python, SQL, C++, HTML/CSS
Backend Frameworks: Node.js, Express, Bun, REST APIs
Distributed Systems: Redis (Streams, Pub/Sub, Lua), WebSockets, SSE, Message Queues (BullMQ), NATS
Databases & Storage: PostgreSQL, Redis, MongoDB, MySQL, Prisma ORM, Cloudflare R2 / AWS S3
DevOps & Infrastructure: Docker, Kubernetes, AWS (EC2), CI/CD, GitHub Actions, PM2, Nginx, Linux
Systems Design & Testing: Distributed Systems, Concurrency, ACID Transactions, Jest, Bun Test, Turborepo

Education

Indian Institute of Technology Madras 2023 – Present
B.S. in Data Science and Applications CGPA: 8.20/10
Coursework: Machine Learning Techniques, Database Management Systems, Modern Application Development
